

MediSelect II Oxygen Piston Regulators

Features:

- Regulator with Flow Selector
- Rotating pressure gauge which allows convenient reading
- 360° swivelling outlet - it enables better orientation of the nasal cannula or oxygen mask towards the patient (preventing from twisting)
- Innovative self centering flow setting device with continuous flow between settings. In the unlikely event of indent mechanism failure, the patient will still be supplied by medicinal gas
- Lateral and frontal reading of flow settings
- Higher number of flow disc holes increases treatment options. Extra flow setting of 25l/min on the traditional 15l/min variant, allows use in resuscitation
